Influenza vaccine is comprised of dead influenza viruses and will not give you the flu. It is given by injection. As with any medication, there are risks and possible side effects/reactions. Side effects of influenza vaccine are generally mild in adults and occur within 6-12 hours after vaccination and can persist for one or two days. These reactions consist of soreness of the injection site, fever, chills, muscular aches and, in rare cases, even death. If you should have a reaction, CONTACT YOUR PRIMARY CARE PROVIDER.

Having received influenza vaccine information (dated 9/19/14) and informed consent, I hereby agree to release and hold McLaren Medical Group, its employees, agents and representatives harmless from further responsibility with regard to my receiving the injections.

I have read the above information and have had the opportunity to ask questions. I understand the benefits and risks of the influenza vaccine as described. I request the flu vaccine to be given to me or to the person named for whom I am authorized to sign.
